PROJECT NAME	IOT Based Child Safety gadget for child safety monitoring and notification

IOT Based Child Safety gadget for child safety monitoring and notification
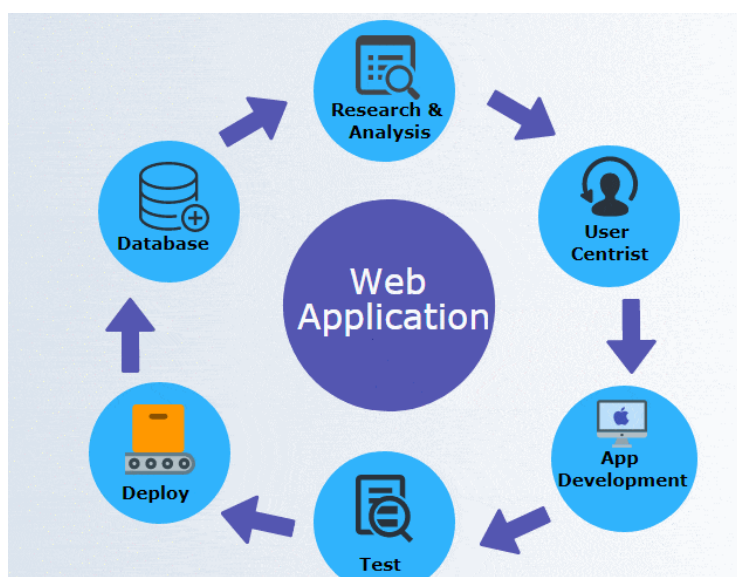

PROJECT OBJECTIVES:

The objectives are:

• To enable the location of the child using GPS module and collect the data using various sensors.

GPS MODULE

• To show the child 's actual data with reference values.
• Enable sending of notification if the child is out of location or when the device realizes abnormal conditions/ situations.
• Develop a prototype of IOT wearable smart band connected to parents' webpage so that they can monitor the actual condition of children at anytime and anyplace.

• Alert is given when there is any change in the data so that parents can reach their children at time without delay.
